

Approved by IRB executive committee: March 11, 2009
Supersedes Document Dated: 5/1/2004
AAHRPP Element II.2.C.

POLICY

All research proposals that intend to enroll human subjects must meet certain criteria before study related procedures can be initiated. The criteria are based on the principles of justice, beneficence and autonomy as discussed in the Belmont Report. All regulatory criteria must be met and any applicable state or local laws apply. In addition, certain other criteria that are unique to the University of Utah and the VASLCHCS may apply and must be met as well. In order to assure that all regulatory criteria and any other applicable requirements are met, the IRB uses a checklist system.

The criteria for approval and other applicable requirements are included in the board member checklist. Assigned IRB reviewers must complete the board member checklist to ensure that the criteria for approval and other applicable requirements are met.

More detailed information about the criteria for approval and other applicable requirements is provided according to specific topics. Board members may access supplemental guidance on the IRB website or in the ERICA system.
