

Call to Aspiring and Experienced Entrepreneurs!

What is DOE Boost?

Sandia National Laboratories is leading the Department of Energy (DOE) Boost Platform, or Boost, with industry partner FedTech, an initiative that brings national labs, startups, academia, and DOE-developed technologies together to find solutions to regional energy and infrastructure challenges. Accepted entrepreneurs will be matched with an exciting emerging technology from a federal lab and finish the program with a startup that is ready to scale, all without having to quit their full-time job.

How Does it Work?

Participants are matched with a novel technology from DOE Labs.

Through coaching, customer discovery, and workshops, participants create use cases for their matched technology.

Entrepreneurial teams assess their technology's market viability.

Successful teams have the chance to license their technology from the labs they have worked with.

What Makes DOE Boost Unique?

- Exclusive access to DOE lab-created technology, including the inventors of your assigned technology.
- Mentorship from seasoned entrepreneurs, technologists, and executives.
- Access to resources from Sandia National Laboratories' and FedTech's ecosystems.
- The chance to license your assigned technology and launch a spinout company!

Who is DOE Boost Looking For?

We are looking for entrepreneurs who are U.S. citizens and who have a wide range of backgrounds and skills, such as:

- Technologists
- Spokespeople
- Businesspeople
- Creative Thinkers
- Operators
- Applicants who have no prior experience in government tech transfer
- **This program is open nationally, however, entrepreneurs in Colorado, Montana, Nevada, New Mexico, Utah and the mountain west region are encouraged to apply!**

Ready to Get Involved?
